

PERMA-GUARD

FOSSIL SHELL FLOUR

(PURE DIATOMACEOUS EARTH)

Grass is the basic food of all land animals. Those that do not eat the grass, eat the animals that do.

In lakes and oceans, Diatoms are the basic food. We call it the "grass of the sea". All higher forms of ocean life depend on it for their survival.

A diatom is a one-celled plant, so tiny that it must be magnified thousands of times to be visible. They live in such substantial quantities that they out-weigh the total of all land plants combined. Diatoms take the minerals out of the water and build a protective shell. As they die, the shells sift to the bottom of the water and form layers, sometimes hundreds of feet thick. These vast layers are called Diatomaceous Earth. Geological changes have placed some of these deposits on dry land.

Some deposits are so contaminated with foreign material as to be useless or even dangerous. Perma-Guard Fossil Shell Flour is so pure, even as it comes from the ground, that it meets the FDA requirements to be called "food grade".

HOW IT WORKS

The tiny Diatom shells are not a food. They do not digest (except some of the trace minerals), they pass all the way through the body. Everything it does is either physical action or electrical action. The Diatom shell is a little cylinder full of holes. It resembles Rice Check Cereal.

The cylinders have a powerful negative charge and the holes are the right size to absorb positively charged viruses and bacteria, hold them, and take them out of the body. Each shell can hold and neutralize many positive particles. Mixed with feed (or eaten free choice), the cylinders, by the millions pass through the stomach and intestine, removing parasites with absolutely no side effects to the animal.

Fossil Shell Flour (Pure Diatomaceous Earth) for your animals is an all natural product with no harmful side effects. It is not a drug, not a chemical, and you feed it to your animals. Toxicity tests show test animals to be totally healthy even when as much as 50% of their diet was Fossil Shell Flour. Safe and harmless is an understatement, yet it is extremely beneficial. Fossil Shell Flour is used internally for the removal of parasites and worms, and gives pets a shiny coat.
